

INMETRO, Brazil approves CPRI

CPRI with its world class facilities and expertise has been adding International recognitions for its facilities. In line with this, recently the Institute has acquired an International approval.

INMETRO, Brazil has approved CPRI as a Third Party Testing Laboratory for conducting tests on transformers according to Inmetro directive No. 378/2010.

INMETRO (National Institute of Metrology, Quality and Technology) is the Government Body responsible for various activities including Conformity Assessments Programs and Certification Processes in Brazil. INMETRO is also responsible for Energy Labeling Program in Brazil as per their law (Ordinance No. 104). According to the Brazilian Labeling Program, all Distribution Transformers up to and including 300kVA rating should have INMETRO label which indicates that the Transformers are at par with the expected quality standards of Brazil. Hence, for supplying Transformers to Brazil market, it is mandatory for manufacturers to participate in Labeling Program and acquire the labels for each rating and voltage class by conducting tests in INMETRO recognized laboratories.

Based on the thorough assessment of CPRI laboratories by the assessors of INMETRO Brazil, CPRI has been recognized as the Third Party Testing Laboratory for Brazilian Labeling Program.

Recognition by INMETRO Brazil is an encouraging development towards Global acceptance of CPRI Testing & Certification. Also Indian manufacturers exporting products to Brazil can utilize CPRI testing facilities.
